Skills

Databases: MariaDB/MySQL, HBase, Apache Cassandra, Redis, PostgreSQL

Big Data & Streaming: Apache Hadoop, Apache Kafka, Apache Flink, Apache Spark

Infrastructure & Tools: Docker, VMware, KRaft, Git, GitHub, Linux (Rocky Linux)

Soft Skills: Problem-Solving, Team Collaboration, Fast Learner, Adaptable

Projects

Distributed System on HBase

- Designed and deployed a fault-tolerant distributed storage system using HBase, with region servers, ZooKeeper quorum, and HDFS configured for high-throughput, low-latency data operations.
- Benchmarked read/write performance under varying workloads and tuned compaction strategies to optimize storage efficiency.

Technologies Used: HBase, Hadoop HDFS, ZooKeeper, Java, Linux, Virtual Machine

Distributed System on Cassandra

- Deployed a multi-node Apache Cassandra cluster with tunable consistency settings; simulated node failure and recovery scenarios to validate replication and horizontal scalability.
- Designed wide-column schemas for time-series and write-intensive workloads, optimizing query performance across distributed nodes.

Technologies Used: Apache Cassandra, CQL, Linux, Virtual Machine

Independent Research: Proposed Dataflow Model of NPCI

- Hypothesized and modeled a probable data flow for NPCI's payment infrastructure (UPI, IMPS, RuPay) based on publicly available documentation and system behavior analysis — internal architecture is not publicly disclosed; this is an informed analytical interpretation for research purposes.

Independent Research: Proposed Dataflow Architecture of Paytm

- Analyzed and proposed a likely data pipeline architecture for Paytm's platform, modeling the probable use of Kafka, Redis, and stream processing for real-time payment processing and fraud detection, based on public engineering resources; findings are presented as an analytical inference.

Education

Bachelor in Computer Application — *Final Year*

Tribhuvan University (TU) — Patan Multiple Campus, Patandhoka, Lalitpur

Academic Projects

Doctor Appointment Booking System

- Developed a full-stack web application for scheduling and managing doctor appointments, incorporating user authentication, doctor profile management, and a relational database schema.

Technologies Used: PHP, MySQL, HTML, CSS, JavaScript

Nepal Tour and Travel Adventure

- Built a travel web application showcasing Nepal's trekking routes and tour packages, featuring an admin panel, online booking form, and database-backed content management.

Technologies Used: HTML, CSS, JavaScript, PHP, MySQL

Training Status Management System

- Developed a desktop application to track employee training enrollment, completion status, and certifications, with role-based access control and reporting functionality.

Technologies Used: Java, MySQL, Swing

Work Experience

Database Administrator Intern | eSewa Ltd. *January 2026 – April 2026*

- Deployed and maintained high-availability database clusters; optimized large-scale data operations to improve query performance, throughput, and system reliability.
- Acquired practical experience in real-time stream processing and modern data pipeline architecture, working with Apache Kafka and Apache Flink in a production environment.

L1 & L2 Support Engineer | Worldlink Communications Ltd. 2019 – 2022

- Delivered first- and second-level technical support, diagnosing network and infrastructure issues and escalating complex cases to ensure minimal service disruption.
- Maintained high customer satisfaction through timely resolution of incidents and effective communication across diverse client environments.
